Acknowledgement

We would like to express our sincere gratitude to all those who helped us in the successful completion of this project. First and foremost, we would like to thank our project guide **Ms. Chaitali S. Patil** for her valuable guidance, continuous support, and encouragement throughout the development of this project. Her suggestions and feedback helped us improve our work at every stage.

We are also thankful to our Head of Department **Mr. Nishad Patel** and all our teachers and department for providing the necessary resources and knowledge required to complete this project successfully. We would like to express our gratitude to our friends and classmates for their support, motivation, and valuable suggestions during the project development.

Finally, we would like to thank our families for their constant encouragement and support, which helped us stay focused and complete this project on time. This project has helped us gain practical knowledge and improve our technical as well as problem-solving skills.

Abstract

The proposed system “CO-PO Attainment Management System” addresses the challenges faced by educational institutions in managing and calculating Course Outcome (CO) and Program Outcome (PO) attainment. Traditional methods of handling assessment data are often time-consuming and prone to errors. This system provides a structured and automated approach to record, process, and analyse student performance, ensuring accurate and efficient attainment calculation.

The application is designed to assist faculty members and academic coordinators in managing student assessment data from various sources such as internal exams, external exams, assignments, practicals, and surveys. It enables systematic CO-PO mapping, calculation of attainment levels, and identification of gaps in student performance. The system also supports data organization, report generation, and continuous monitoring, which helps in improving teaching strategies and overall academic quality.

The proposed system is developed using modern web technologies such as HTML, CSS, and JavaScript for the front-end, and Django with SQLite3 for the backend. This ensures a user- friendly interface, secure data handling, and efficient performance, making the system reliable and easy to use for academic institutions.

List of tables
